PREDICTIVE PARSING

AIM: A program for Predictive Parsing,

ALGORITHM:

- 1. Start the program.
- 2. Initialize the required variables.
- 3. Get the number of coordinates and productions from the user.
- 4. Perform the following

```
for (each production A \rightarrow A in G) {
for (each terminal a in FIRST(\alpha))
add A \rightarrow A
to M[A, a];
if (E is in FIRST(\alpha))
for (each symbol b in FOLLOW(A))
add A \rightarrow A
to M[A, b];
```

- 5. Print the resulting stack.
- 6. Print if the grammar is accepted or not.
- 7. Exit the program.
